

DISTRIBUTED ANTENNA SYSTEMS (DAS)

**Cellular Connectivity
Where Business Happens.**

Reliable cellular coverage is essential in today's connected facilities. ComNet Communications designs, installs, and supports commercial Distributed Antenna Systems (DAS) that extend cellular coverage and improve connectivity throughout complex indoor environments.

Why Choose ComNet

- Nationwide delivery across complex campus environments
- Decades of experience in large-scale infrastructure deployments
- Deep expertise in live, occupied environments
- Safety-driven execution with a proven track record
- Infrastructure built for performance, scalability, and long-term serviceability

Systems & Solutions

End-to-End DAS Design and Deployment

- From initial site assessments and system design through installation and final commissioning, ComNet delivers DAS solutions from concept to completion

Structured Cabling and Fiber Backbone Infrastructure

- Fiber and copper infrastructure supporting cellular signal distribution throughout large facilities, multi-building properties, and enterprise environments.

Headend and IDF Buildouts

- Installation and organization of DAS headend equipment, distribution spaces, and supporting infrastructure for reliable system operation and accessibility.

Pathway Design and Installation

- Planning and installation of conduit, innerduct, cable tray, and supporting pathways designed for scalability, protection, and long-term serviceability.

Antenna Placement and Installation

- Strategic antenna placement and professional installation to support consistent indoor cellular coverage while integrating with existing building infrastructure.

Carrier and Neutral Host Integration

- Coordination with wireless carriers and neutral host providers to support multi-carrier connectivity and system integration.

Testing, Labeling, and Documentation

- RF testing, system verification, accurate labeling, and detailed documentation to support commissioning, troubleshooting, and ongoing maintenance.

New Construction and Retrofit Support

- DAS infrastructure solutions for new construction, facility expansions, and occupied buildings, with careful coordination to minimize operational disruption.
